

MD ABDULLAH IBNA MASUD

AI/ML • Software • Data • IT & Creative

Feni, Bangladesh • (+880) 1627 009699 • anbimasud1@gmail.com

Portfolio: [masud-portfolio](#) • GitHub: github.com/anbimasud • LinkedIn: [md-abdullah-ibna-masud](#)

Career Objective

Built and deployed an end-to-end speech-emotion-recognition system – from a self-collected audio dataset to a fine-tuned deep learning model and a live web demo – as an undergraduate thesis at Feni University (CGPA 3.59/4.00). Comfortable across the AI/ML, data and software-development stack, with additional grounding in IT support, databases and office productivity tools. Seeking an entry-level role in **AI/ML, Software Development, Data Analysis, or IT/MIS Support** to bring a research-driven, detail-oriented approach to real problems.

Technical Skills

Programming & AI/ML: Python, Machine Learning, Deep Learning, WavLM, Speech Emotion Recognition, NumPy, Pandas, Matplotlib, Seaborn

Web & Software: HTML, CSS, JavaScript, Node.js, REST APIs, Git, GitHub

Database & Productivity: SQL (MySQL), Microsoft Excel, Word, PowerPoint

IT Support & Platforms: IT Support, Troubleshooting, Networking Basics, MIS, VS Code, Jupyter Notebook, Google Colab, Kaggle

Design: Figma, Graphic Design, Logo Design

Undergraduate Thesis -- Flagship Project

Parameter-Efficient Fine-Tuning of WavLM for Low-Resource Noakhali Bangla Dialect Speech Emotion Recognition with Controlled Noise Augmentation Mar 2026

Feni University

- Collected and curated a speech-emotion dataset of ~**2,300 audio clips from 25 participants** in the Noakhali Bangla dialect – a language variety with very few existing speech/NLP resources.
- Adapted a pretrained **WavLM** speech model using parameter-efficient fine-tuning, reducing compute cost versus full-model training.
- Designed a **controlled noise-augmentation** pipeline to test and improve model robustness under real-world acoustic conditions.
- Ran the complete pipeline independently in Python: data preprocessing, model training, evaluation and error analysis.

Selected Project

Speech Emotion Recognition – Interactive Web Demo

2026

Personal Project

- Connected the fine-tuned thesis model to a browser-based interface where a user can upload or record audio and instantly view the predicted emotion – turning a research model into a usable, practical front-end, live on my portfolio (link above).

Education

B.Sc. in Computer Science and Engineering

2022 – 2025

Feni University CGPA: **3.59 / 4.00** (EQF Level 6) • Coursework: Data Structures & Algorithms, DBMS, Computer Networks, Software Engineering, Artificial Intelligence, OOP, Linear Algebra

Courses & Certifications

- **Machine Learning Foundations: A Case Study Approach** – Regression, Classification, Clustering, Recommender Systems, Deep Learning (97.61%)
- **Getting Started with Machine Learning Algorithms** – Linear & Logistic Regression, K-Means Clustering, Decision Tree, Random Forest, PCA, Q-Learning
- **Machine Learning using Python** – Supervised & Unsupervised Learning, Time-Series Modeling, Kernel SVM
- **AI/ML Projects** – ML Algorithms, DL Techniques, NLP, Model Evaluation & Optimization, Problem Solving

Languages

Bengali – Native • **English** – Listening C2, Reading C2, Speaking B1, Writing B1
